ADVANCE REPORTS

Bureau of the Census

HOUSING CHARACTERISTICS  
STATES

March 1961

HC(A1)-1

## Alabama

(These figures supersede the preliminary counts published in the HC(P1) series of reports. The present series consists of 51 reports--one each for the 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

### DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.--Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

HC(A1)-2

## Alaska

(These figures supersede the preliminary counts published in the HC(PI) series of reports. The present series consists of 51 reports--one each for the 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample, consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

### DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.--Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

U.S. DEPARTMENT OF COMMERCE, Frederick H. Mueller, Secretary

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

HC(A1)-4

## Arkansas

(These figures supersede the preliminary counts published in the HC(P1) series of reports. The present series consists of 51 reports--one each for the 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

### DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.-- Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, Secretary  
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 15 cents. Complete set of 51 reports, \$6.

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

HC(A1)-5

**California**

(These figures supersede the preliminary counts published in the HC(PL) series of reports. The present series consists of 51 reports—one each for the 50 States, and the District of Columbia—which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

**DEFINITIONS AND EXPLANATIONS**

**Standard metropolitan statistical area.**--Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

**Housing unit.**--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, Secretary  
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 15 cents. Complete set of 51 reports, \$6.

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

HC(A1)-6

## Colorado

(These figures supersede the preliminary counts published in the HC(Pl) series of reports. The present series consists of 51 reports--one each for the 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

### DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.--Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*  
BUREAU OF THE CENSUS, Robert W. Burgess, *Director*

*For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 15 cents. Complete set of 51 reports, \$6.*

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

HC(A1)-7

## Connecticut

(These figures supersede the preliminary counts published in the HC(PI) series of reports. The present series consists of 51 reports--one each for the 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

### DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.-- Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, Secretary  
BUREAU OF THE CENSUS, Robert W. Burgess, Director

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 15 cents. Complete set of 51 reports, \$6.

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

HC(A1)-8

Delaware

(These figures supersede the preliminary counts published in the HC(PL) series of reports. The present series consists of 51 reports--one each for the 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.--Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen, or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

## District of Columbia

(These figures supersede the preliminary counts published in the HC(PI) series of reports. The present series consists of 51 reports--one each for the 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

### DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.-- Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, Secretary  
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 15 cents. Complete set of 51 reports, \$6.

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

Census  
of  
Housing

ADVANCE REPORTS

HOUSING CHARACTERISTICS

STATES JUN 25 3 PM '61

March 1961

LITERARY

HC(Al)-10

Florida

(These figures supersede the preliminary counts published in the HC(Pl) series of reports. The present series consists of 51 reports--one each for the 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.--Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, Secretary  
BUREAU OF THE CENSUS

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

HC(A1)11

## Georgia

(These figures supersede the preliminary counts published in the HC(PI) series of reports. The present series consists of 51 reports--one each for the 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

### DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.-- Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, Secretary  
BUREAU OF THE CENSUS

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

HC(A1)-12

## Hawaii

(These figures supersede the preliminary counts published in the HC(Pl) series of reports. The present series consists of 51 reports--one each for the 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

### DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.--Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, Secretary  
BUREAU OF THE CENSUS, Robert W. Burgess, Director

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 15 cents. Complete set of 51 reports, \$6.

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

## ADVANCE REPORTS

HOUSING CHARACTERISTICS  
STATES1960  
Census  
of  
Housing

March 1961

HC(A1)-13

## Idaho

(These figures supersede the preliminary counts published in the HC(PL) series of reports. The present series consists of 51 reports--one each for the 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

## DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.--Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, Secretary  
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 15 cents. Complete set of 51 reports, \$6.

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

## Illinois

(These figures supersede the preliminary counts published in the HC(PI) series of reports. The present series consists of 51 reports--one each for the 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

### DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.-- Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.--A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

March 1961

HC(A1)-15

## Indiana

(These figures supersede the preliminary counts published in the HC(PI) series of reports. The present series consists of 51 reports—one each for the 50 States, and the District of Columbia—which are numbered in alphabetical order rather than in order of publication)

This report presents selected housing characteristics for each standard metropolitan statistical area (SMSA) and each place of 10,000 inhabitants or more, and any towns, townships, and counties classified as urban under specified criteria. The data represent final tabulations from the 1960 Census of Housing and are limited to characteristics which were enumerated on a 100-percent basis. Value and contract rent are not shown for places where they were enumerated for a sample consisting of every fourth housing unit.

More detailed information about items presented in this report, as well as data for all other items, will be provided in Volume I, "General Characteristics." The State reports comprising Volume I provide data for standard metropolitan statistical areas, urbanized areas, urban and rural places, and the counties. The Volume I report for the United States will contain summary data for regions, divisions, States, standard metropolitan statistical areas, and places of 50,000 inhabitants or more.

An outline of the 1960 Housing Census publication program may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

### DEFINITIONS AND EXPLANATIONS

Standard metropolitan statistical area.—Except in New England, a standard metropolitan statistical area (SMSA) is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city.

In New England, towns and cities are the units used in defining SMSA's. Here a population density of at least 100 persons per square mile is used as the measure of metropolitan character.

In the 1950 Census reports, data were presented for standard metropolitan areas and in the 1940 Census a somewhat similar type of area called the "metropolitan district" was used.

Housing unit.—A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, Secretary

occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

In the 1950 Census, the unit of enumeration was the dwelling unit. Although the definition of the housing unit in 1960 is essentially similar to that for the dwelling unit in 1950, the housing unit definition was designed to encompass all private living quarters, whereas the dwelling unit definition did not completely cover all private living accommodations.

Occupied housing unit.--A housing unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, for example, on vacation. However, if the persons living in the unit have their usual place of residence elsewhere, the unit is classified as vacant.

Tenure.--A housing unit is "owned or being bought" if the owner or co-owner lives in it, even if it is mortgaged or not fully paid for. All other occupied units are classified as renter occupied.

Color.--Occupied housing units are classified by the color of the head of the household. The group designated as "nonwhite" includes Negro, Indian, Japanese, Chinese, and Filipino. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite race are classified as white.

Persons.--All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the housing unit, including lodgers, foster children, wards, and resident employees who share the living quarters of the household head.

Vacant housing unit.--A housing unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant units are included if they are intended for occupancy as living quarters; however, if the vacant unit is unfit for use and beyond repair so that it is no longer considered living quarters, it is excluded from

the inventory. New units not yet occupied were enumerated as vacant housing units if construction had proceeded to the point that all the exterior windows and doors were installed and final usable floors were in place.

"Year round" vacant units are those intended for occupancy at any time of the year. "Seasonal" units are those intended for occupancy during only a season of the year.

Available vacant units are those which are on the market for year-round occupancy, are in either sound or deteriorating condition, and are being offered for rent or for sale. The group "Available for sale only" is limited to units for sale and not for rent. "Available for rent" consists of units being offered for rent and those being offered for rent or sale. Of the vacancies for year-round occupancy and in sound or deteriorating condition, "Balance" consists of units which are rented or sold and awaiting occupancy; units held for occasional use; and units held off the market for other reasons.

Rooms.--The respondent's count of rooms was accepted unless a question was raised about which rooms to count. Rooms to be counted included whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not to be counted as rooms were bathrooms, halls, closets, alcoves, pantries, pullman kitchens, unfinished space, and offices used only by persons not living in the unit. Partially divided rooms such as living and dining areas were to be counted separately if there were fixed or movable partitions from floor to ceiling.

Condition and plumbing facilities.--Data on condition of a housing unit are shown in combination with data for plumbing facilities. Three categories of condition were used in the 1960 Census: Sound, deteriorating, and dilapidated.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance. Examples of slight defects are lack of paint; slight damage to porch or steps; small cracks in walls, plaster, or chimneys; broken gutters or downspouts.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. It has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of such defects are shaky or unsafe porch or steps; broken plaster; rotted window sills or frames. Such defects are signs of neglect which lead to serious structural damage if not corrected.

Dilapidated housing does not provide safe and adequate shelter. It has one or more critical defects; or has a combination of intermediate defects; or is of inadequate original construction. Critical defects are those which indicate continued neglect and serious damage to the structure.

The category "With all plumbing facilities" includes units which have hot and cold running water inside the structure, and flush toilet and bathtub or shower inside the structure for the exclusive use of the people living in the housing unit being enumerated.

The category "Lacking only hot water" includes units which have flush toilet and bathtub or shower for the exclusive use of the household but which have only cold running water inside the structure.

The category "Lacking private toilet or bath or running water" includes units which either lack one or more of these facilities

or share the facilities with persons living in another housing unit.

Value.--Value is the respondent's estimate of how much the property would sell for on today's market. For vacant units, it is the price asked for the property. Value data are limited to properties without business and containing only one housing unit. Trailers are excluded.

Contract rent.--Contract rent is the rent agreed upon regardless of the furnishings, utilities, or services included. For vacant units, it is the amount asked for the unit.

The average contract rent, as used in this report, is the arithmetic mean. For occupied units, it is computed by dividing the sum of the rental amounts by the number of renter-occupied units; units for which no cash rent is paid are excluded from the computation. For vacant units, the total amount of rent asked is divided by the number of vacant units available for rent.

Median.--The median is the theoretical value which divides a distribution of housing units into two equal groups--one group having characteristics smaller than the median, and the other having characteristics larger than the median. In the case of median rooms, for example, one-half the units have fewer rooms than the median and one-half have more rooms than the median. In computing the median, a continuous distribution is assumed.

INDIANA—STANDARD METROPOLITAN STATISTICAL AREAS, COUNTIES,  
AND PLACES OF 10,000 OR MORE

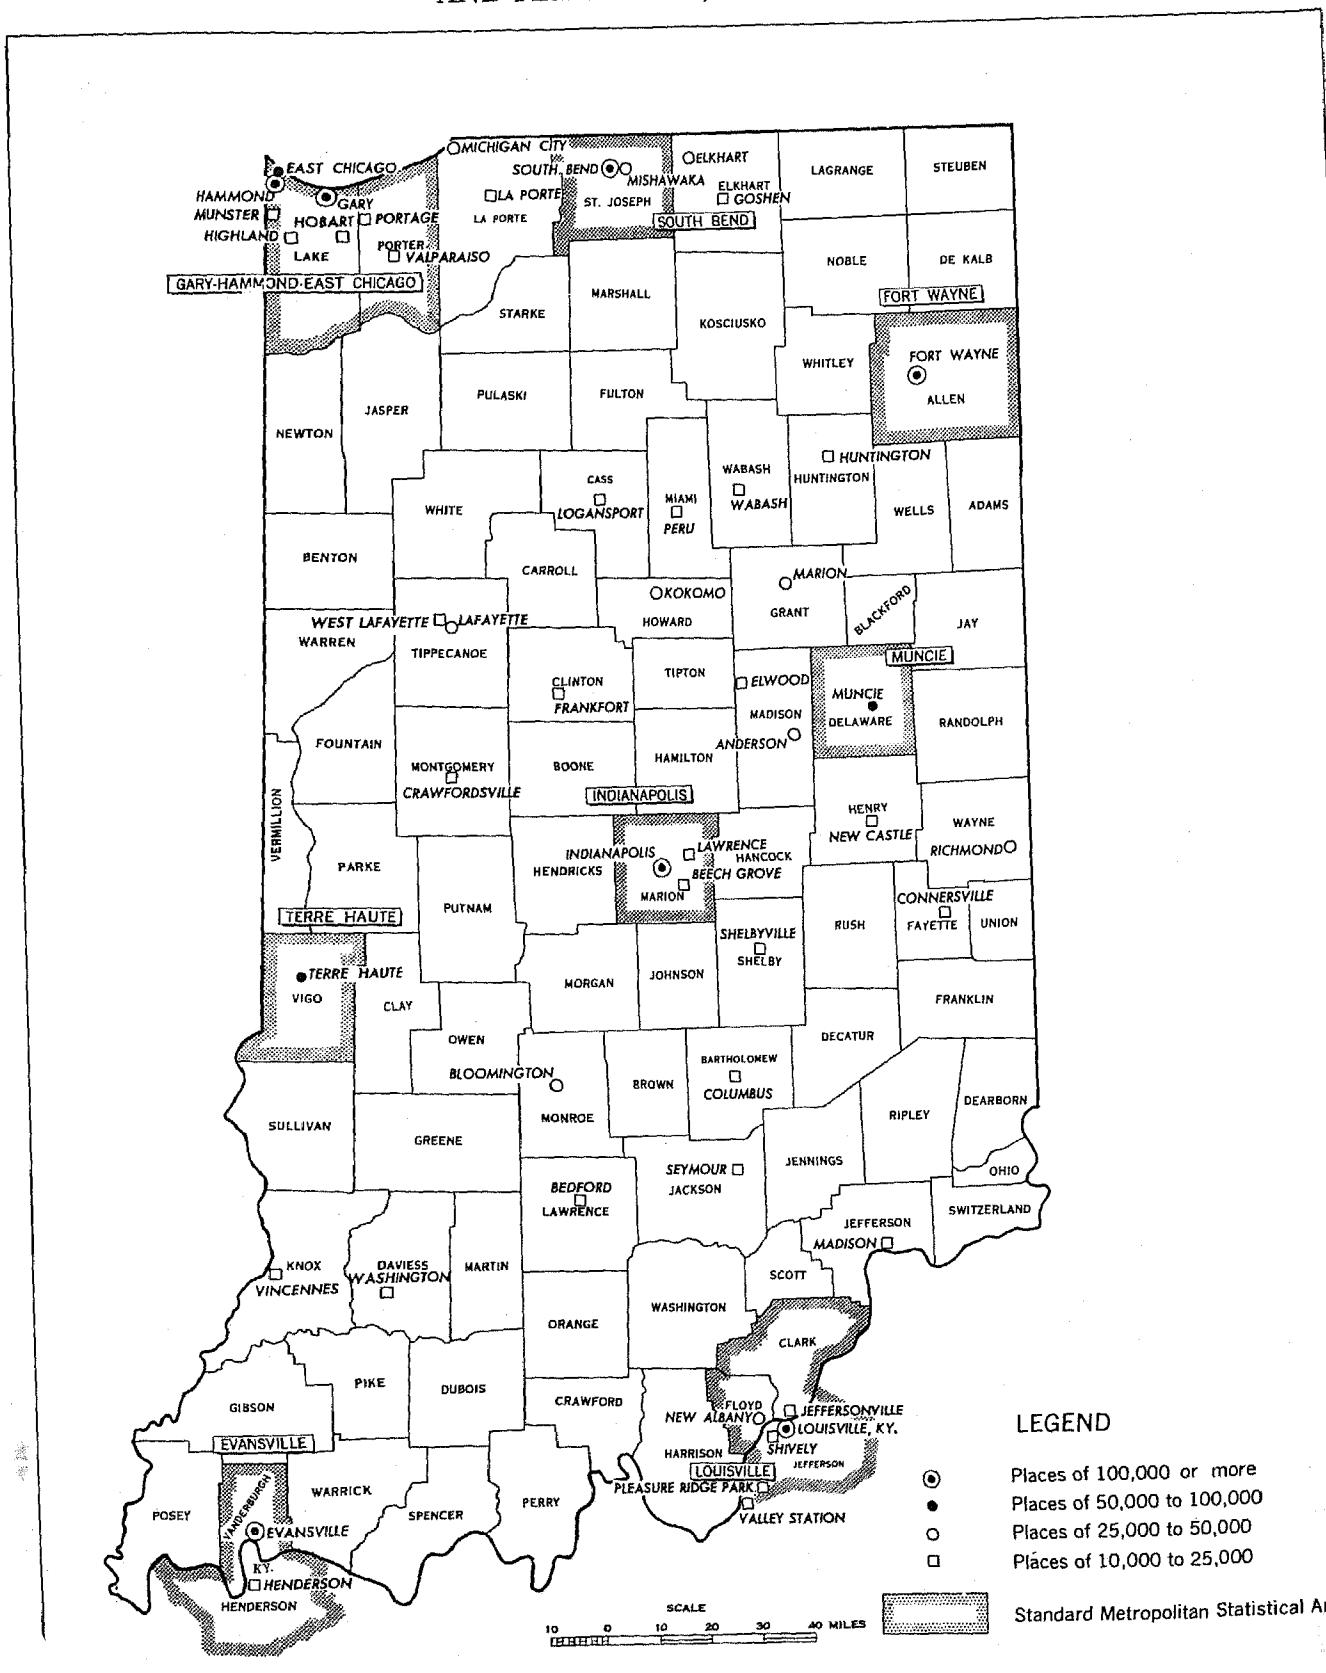

Table 1.--SELECTED HOUSING CHARACTERISTICS, FOR THE STATE, STANDARD METROPOLITAN STATISTICAL AREAS, AND PLACES OF  
10,000 INHABITANTS OR MORE: 1960

(Median or average not shown where base is less than 50; plus (+) or minus (-) after number indicates median above or below that number)
